UNCERTAIN (KYTX) - In march, an old tenant was reintroduced to the Big Cypress Bayou in Uncertain. The Nature Conservancy released more than 2,000 of these Paddlefish into the river and will release another 2,000 on Tuesday. Their numbers had been on a steady decline in Texas due to dams ruining the fish's habitat.

These fish will be equipped with radio transmitters so researchers can track them for the next 5 years and track the fish's ability to multiply.
